

Availability and performance statistics

On this page you can find the statistics of the API's availability and performance on a quarterly basis. The service availability is calculated as uptime (100%) minus the downtime percentage (%). The performance is shown in milliseconds (ms) and is the time it takes for the bank to respond to a specific request made by a third party.

Service availability

The table below contains the monthly availability and the monthly success of all PSD2 API's combined.
